FORÇA EM CAMPO

ATTENTION

The MANÁ CASSAVA HARVESTER was developed to solve the difficulties involved in harvesting cassava. The MANÁ CASSAVA HARVESTER has the structural solidity of Inroda's products. It has two harvesting lines and an independent hydraulic system, and can be used for uprooting, digging, separation and bagging.

1. PRESENTATION

This manual is provided by INRODA - Indústria de Roçadeiras Desbravador Avaré Ltda. and is considered an integral part of the machine. The purpose of this material is to guide the user through everything that is necessary for it to function properly, from acquisition to operational procedures for use, safety and maintenance.

The operator must carefully read the entire manual before putting the equipment into operation and make sure of the safety recommendations. The dealer will make the technical delivery of the equipment, advising the consumer on maintenance items, safety, their obligations in the event of technical assistance, strict observance of the warranty term and reading of the instruction manual.

Any request for technical assistance regarding the warranty should be made to the organization from which the equipment was purchased.

We reiterate the need to read the warranty certificate carefully and to observe all the items in this manual, as by following the items correctly the consumer will be extending the useful life of their equipment.

2. WARRANTY CERTIFICATE

INRODA - Indústria de Roçadeiras Desbravador Avaré Ltda. grants its customers and dealers a six (6) month warranty for equipment manufactured by the company, starting from the date of delivery on the invoice to the first end consumer, undertaking to repair and/or replace components that show a proven manufacturing defect during this period.

- Reimbursement of freight, travel and other expenses is the

The warranty does not include the following:

responsibility of the dealer;

Parts that compose the equipment, but that are not manufactured by INRODA, such as cardan shafts, tires, hydraulic components, belts, among others. The warranty for such components is the responsibility of their respective manufacturers;

- Components that are damaged or broken due to normal wear and tear and/or evidence of misuse or lack of maintenance of the equipment;
- INRODA's liability for any damage occurring to the equipment at the time of transport.
- Equipment that had its original characteristics modified without prior authorization from INRODA, as well as the use of non-original parts.

In order to claim the product warranty, the dealer must be contacted by the customer to carry out the initial service, identify the problem and repair the equipment, replacing any necessary components. When the possibilities for resolving the service by the dealer have been exhausted without resolving the problem, support from the INRODA technical team must be requested using the warranty request form. All parts and items replaced in compliance with the equipment warranty will be the exclusive property of INRODA.

The replaced components, either by the dealer or by the INRODA technical team, will be analyzed at the factory and, if it is concluded that it is not a manufacturing defect, the dealer will be responsible for the costs generated with the replacement of the items/parts of the equipment.

Any and all necessary repairs to the equipment can only be carried out with the prior and express authorization of INRODA, upon presentation of a quote describing the service to be performed and the parts to be used.

The conditions of the warranty certificate do not constitute a reason for termination, suspension or postponement of payments under the equipment purchase contract.

INRODA is entitled, at its sole discretion, to make changes and/or improvements to the equipment without prior notice, without the obligation to apply the same changes/improvements to previously manufactured equipment.

3. SAFETY RULES

THIS WARNING SYMBOL INDICATES IMPORTANT SAFETY WARNINGS IN THIS MANUAL. WHENEVER YOU FIND THIS SYMBOL, READ THE FOLLOWING MESSAGE CAREFULLY AND BE AWARE OF THE POSSIBILITY OF PERSONAL ACCIDENTS.

- 1 - When operating with the implement, do not allow people to remain too close or on the implement.
- 2 - Do not start the tractor engine indoors, without proper ventilation, as the exhaust gases are harmful to health.
- 3 - When connecting or disconnecting the hydraulic hoses, relieve the circuit pressure.
- 4 - Periodically check the condition of the hoses. If there is any signs of an oil leak, it must be replaced immediately, because oil works under high pressure and can cause serious injury;
- 5 - Do not make adjustments while the implement is in operation.
- 6 - When driving the tractor on roads, keep the brake pedals connected.
- 7 - When carrying out any assembly or disassembly work on the disc sections, put gloves on your hands.
- 8 - When maneuvering the tractor to hitch the implement, make sure you have the necessary space and that no one is too close, Always maneuver in low gear and be prepared to brake in an emergency.
- 9 - Do not wear very loose clothes, as they could become entangled in the implement.
- 10 - Always drive the tractor at speeds compatible with safety, especially when working on rough terrain or slopes, places where the tractor must always be in gear;
- 11 - When working on sloping ground, proceed with care, always trying to maintain the necessary stability. In case of imbalance, reduce acceleration, turn the wheels to the side of the slope and never lift the implement.
- 12 - When starting the tractor engine, be properly seated in the operator's seat and fully aware of the correct and safe handling of both the tractor and the implement. Always place the gearshift lever in the neutral position, disengage the PTO control gear and place the hydraulic controls in the neutral position.
- 13 - Do not operate the tractor with a light front end. If the front tends to lift add more weight to the front or front wheels.
- 14 - When leaving the tractor, place the gearshift lever in the neutral position and apply the parking brake. Never leave the implement hitched to the tractor in the raised position of the hydraulic system.

WARNING

Improper handling of this equipment can result in serious or fatal accidents. Before putting the equipment into operation, carefully read the instructions contained in this manual. Make sure that the person responsible for the operation is instructed on correct and safe handling. Also make sure that the operator has read and understood the product's instruction manual.

EQUIPMENT DEVELOPED FOR AGRICULTURAL USE. DO NOT ALLOW PEOPLE TO APPROACH DURING SERVICE. INRODA RESERVES THE RIGHT TO CHANGE THE TECHNICAL CHARACTERISTICS OF THIS PRODUCT WITHOUT PRIOR NOTICE.

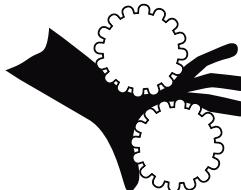

Read the instruction manual carefully for recommended safety practices.

There is a risk of injury to the operator and bystanders during operations for the following reasons:

- Body contact with the active elements of the machine can cause accidents. Always wear Personal Protective Equipment (PPE).
- Falls that can cause serious or fatal injuries.

RISK OF CRUSHING

RISK OF DEATH

- 1 - Stay away from the harvest lines while they are rotating;
- 2 - When operating the Maná Cassava Harvester, do not allow people to remain too close to the moving parts;
- 3 - Read the instruction manual before operating and follow all recommendations.
- 4 - Know how to immediately stop the tractor and the implement in case of emergency.
- 5 - Untrained individuals and children may not operate this equipment.
- 6 - Beware of uneven terrain, slow down on curves.
- 7 - When leaving the tractor, place the gearshift lever in the neutral position and apply the parking brake. Never leave implements hitched to the tractor;*
- 8 - Before starting any operation, carry out a general check of the Maná Cassava Harvester and the nuts, pins and shafts;
- 9 - When maneuvering the tractor to hitch the implement, make sure you have the necessary space and that there is no one too close, always maneuver at low speed and be prepared to brake in an emergency;*
- 10 - When starting the tractor engine, be properly seated in the operator's seat and fully aware of the correct and safe handling of both the tractor and the implement. Always place the gearshift lever in the neutral position, disconnect the power take-off control gear and place the hydraulic controls in the neutral position;*
- 11 - Do not start the tractor engine in a closed space or without adequate ventilation, as the exhaust gases are harmful to health;*
- 12 - When driving the tractor on roads, keep the brake pedals interconnected and use safety signs;*
- 13 - Do not work with the tractor with a light front. If the front tends to lift, add more weights to the front or front wheels;*
- 14 - When working on sloped terrain, proceed with care, always trying to maintain the necessary stability;*
- 15 - Alcoholic beverages or some medications can cause loss of reflexes and change the physical condition of the operator. Therefore, never operate this equipment under the influence of these substances;
- 16 - Read or explain all the procedures above to the user who cannot read.

SAFETY STICKERS

Safety stickers warn of the points on the equipment that require the most attention and must be kept in good repair. If the safety stickers are damaged or become illegible, they

must be replaced. INRODA supplies the stickers upon request of the respective codes.

TRANSPORT BY TRUCK/TRAILER

Long-distance transportation must be by truck, trailer, etc., following these safety instructions:

- Use suitable ramps to load and unload equipment. Do not load on slopes, as serious accidents can occur.
- When loading with a winch, use the appropriate lifting points.
- Properly wedge the equipment.
- Use restraints (cables, chains, straps, etc.) in sufficient quantity to immobilize the equipment during transport;
- Check the condition of the load after the first 8 to 10 kilometers of travel, then every 80 to 100 kilometers, remembering to check that the lashings are not loosening. Check the load more often on bumpy roads.
- Stay alert. Be careful with the transport height, especially under power lines, viaducts, etc.
- Always check the current legislation on the height and width limits of the load. If necessary use flags, lights and reflectors to alert other drivers.

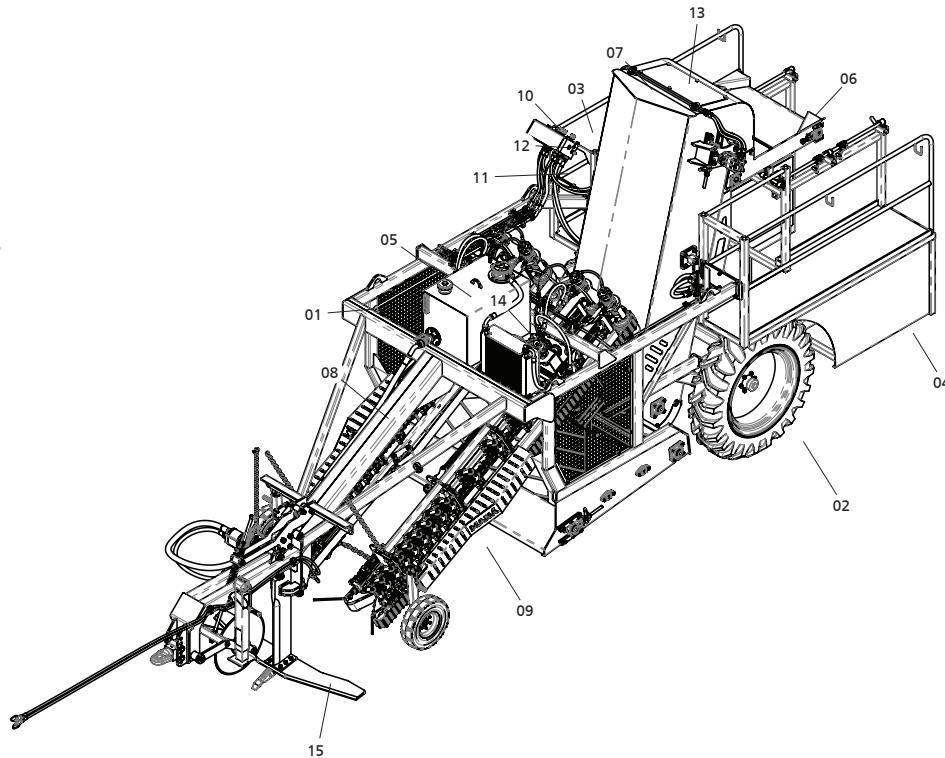

NOTE

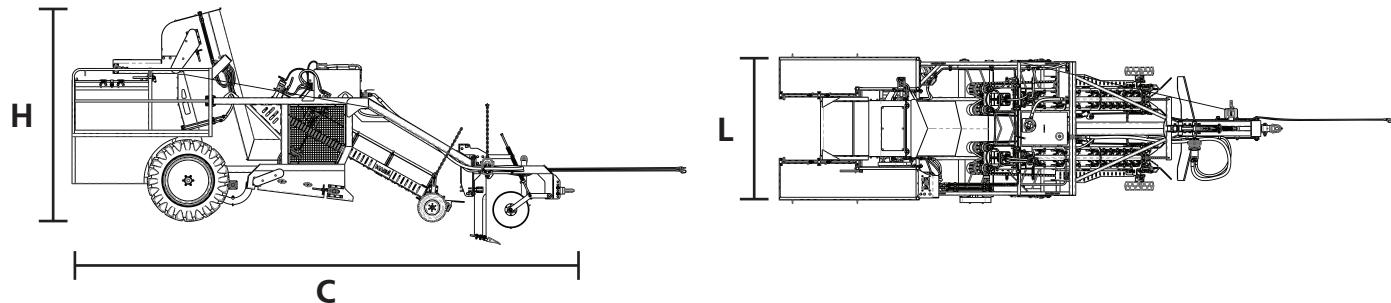

When transporting your equipment hitched to the tractor, do not exceed a speed of 25 KM/h or 15 MPH to prevent accidents and damage to it, the tractor or the operator.

6. ABOUT THE IMPLEMENT

Applications

Two-row harvesting removes the cassava roots from the soil and separate them without crushing the roots. Conveyors carrying out transport and lifting until storage in bags. Crop residues are sent and discarded into soil to form organic matter.

Characteristics

- Digging shank makes uprooting easier.
- Two harvesting lines.
- Harvesting mechanism with hydraulic drive.
- Independent hydraulic system.
- Easy to operate control panel.
- Platform that meets safety standards.
- Bag storage system.
- Non-stop unloading.

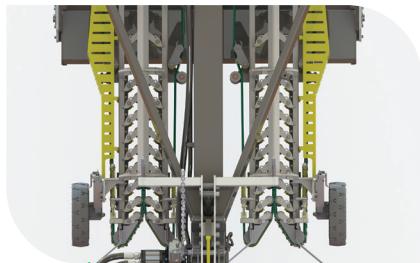

Technical recommendations for farming

The 1st pruning for harvest must be carried out 2 days in advance and at a height of 35 cm. In crops with 02 cycles, it is mandatory that the 1st pruning is carried out at a height of 30 cm. Spacing between planting lines of 90 cm. Spacing between plants of 60 cm. When planting, respect the direction of the rods for uniform growth.

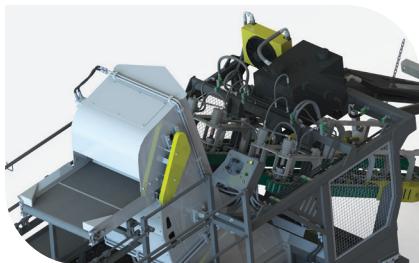

DOUBLE HARVESTING SYSTEM DOUBLE

Double harvesting line with 90cm spacing, equipped with stretchers along its length ensuring that the cassava stalk is pulled out and taken to the next harvesting process.

INDEPENDENT HYDRAULIC SYSTEM

An independent hydraulic system allows the equipment to be operated by different tractors without requiring any resources from the tractor, and guarantees uniform operation of the equipment.

STORAGE SYSTEM IN BAGS

The bag storage system ensures that all the roots are stored and delivered for processing in the industry.

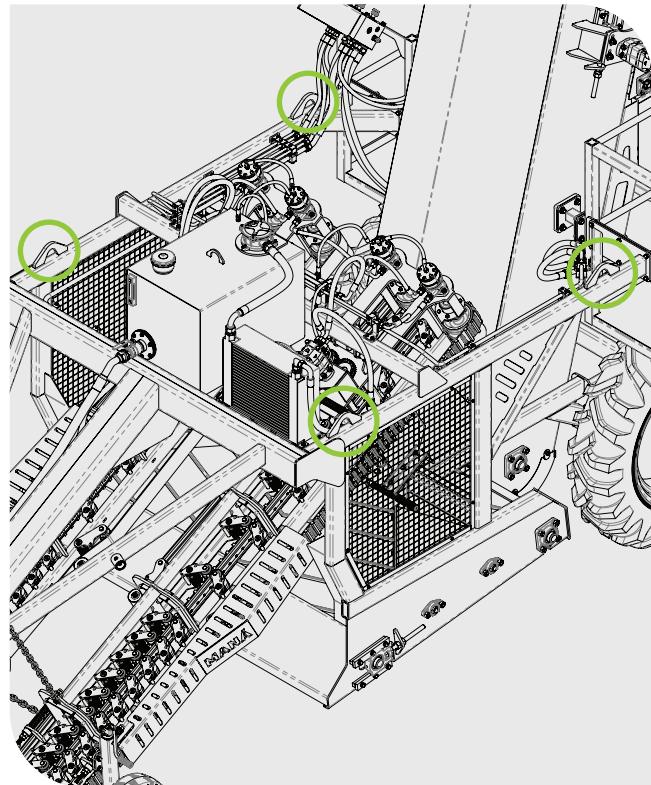

7. LIFTING SUPPORT POINTS

The Maná Cassava Harvester has lifting points considering the entire weight distribution of the equipment, always keeping it level when lifted.

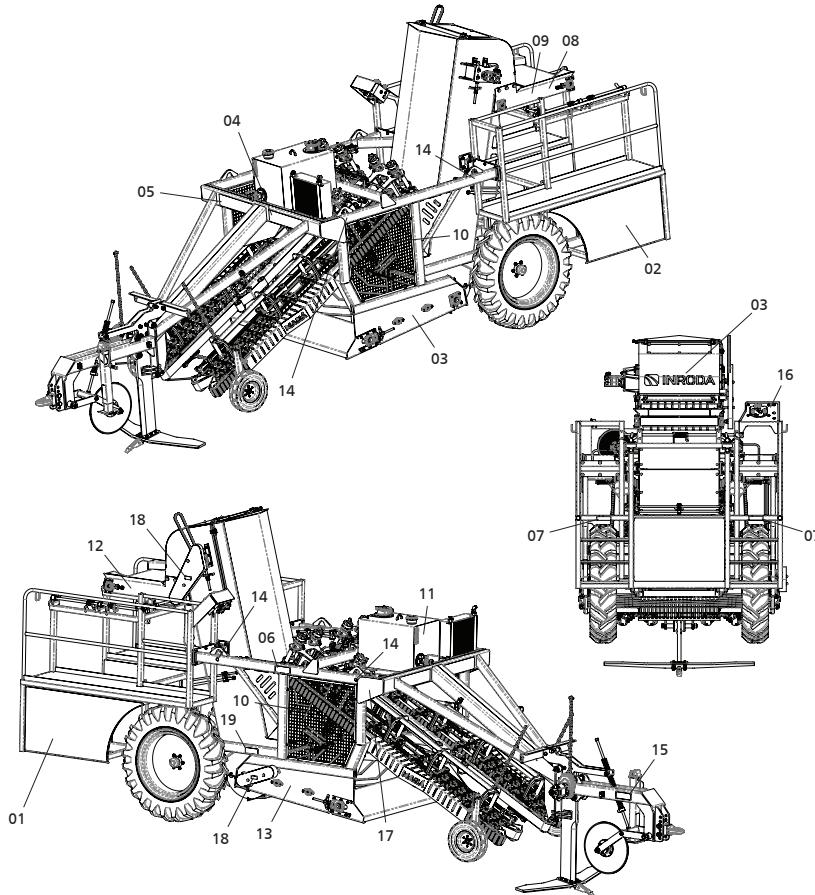

ATTENTION

Make sure the lifting straps are in perfect condition to support the weight of the equipment.

8. STICKERS PLACEMENT

- 01 - Right side Maná sticker.
- 02 - Left side Maná sticker.
- 03 - Inroda resin sticker - 747 x 115mm.
- 04 - Maná Sticker.
- 05 - Inroda Sticker 590 x 130mm.
- 06 - Caution hose leak sticker.
- 07 - Use the handrail sticker.
- 08 - Attention risk of falling.
- 09 - Attention wear PPE sticker.
- 10 - Risk of crushing sticker.
- 11 - Attention sticker check the oil level.
- 12 - Instruction manual attention sticker.
- 13 - Lubricate and retighten disc harrow sticker.
- 14 - Lifting sticker.
- 15 - Warning disc sticker.
- 16 - Control panel sticker.
- 17 - Patent required sticker.
- 18 - Attention do not remove the guards sticker.
- 19 - Tire calibration sticker.

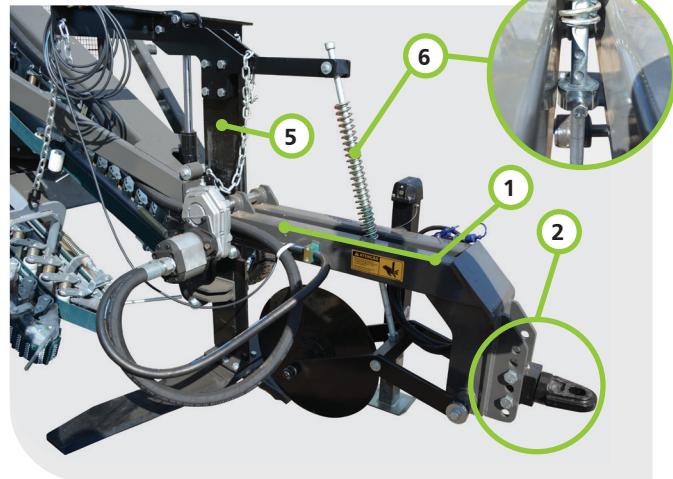

9. ADJUSTMENTS AND OPERATIONS

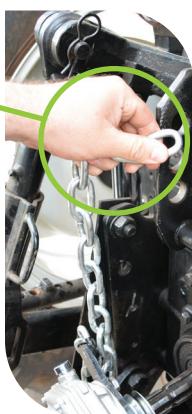

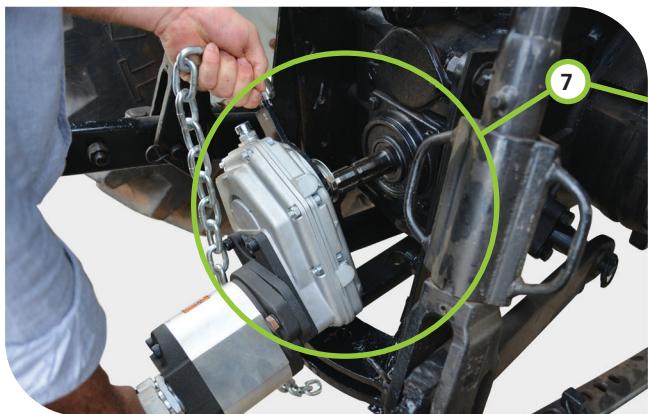

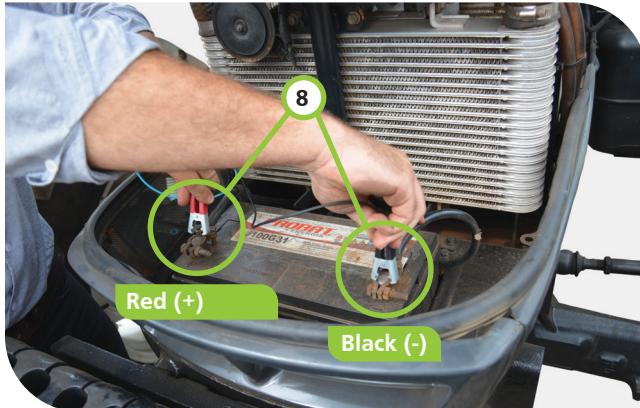

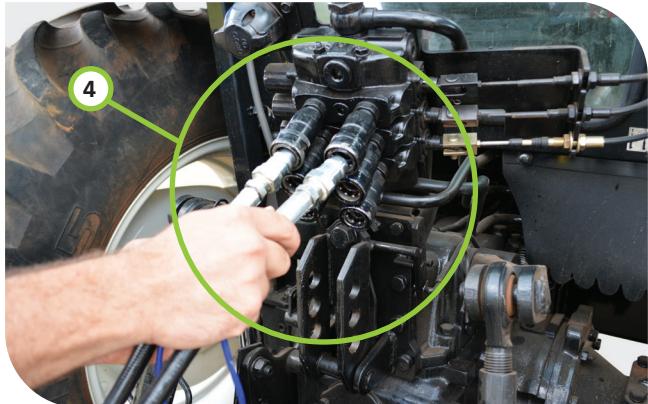

9.1 Uprooter hitch and adjustment

- (1) Make sure the header is level and parallel to the ground.
- (2) If an adjustment is necessary, the shackle can be moved by loosening its screws to change its position at the tip of the header in relation to the tractor's drawbar. (3) Hitch the tractor's drawbar;
- (4) Connect the hoses to the tractor's hydraulic system;
- (5) Using the hydraulic system, the uprooter height can be adjusted (maximum 400 mm);
- (6) Adjust the cutting disc using spring pressure;
- (7) Couple the pump to the Power Take-Off (PTO) and secure the chain in the appropriate place;
- (8) Connect the electrical harness.

ATTENTION
Before starting harvesting work,
check that the oil tank valve is open!

**NOTE**

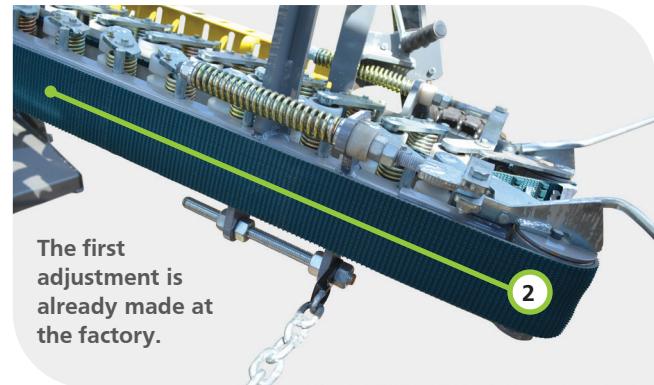

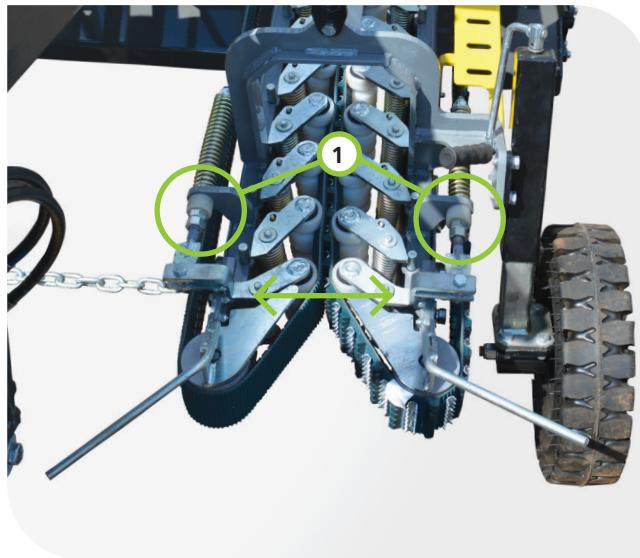

Check and perform daily maintenance to preserve the quality of the components.

ATTENTION

After the first day of work with the implement, retighten all screws and nuts.

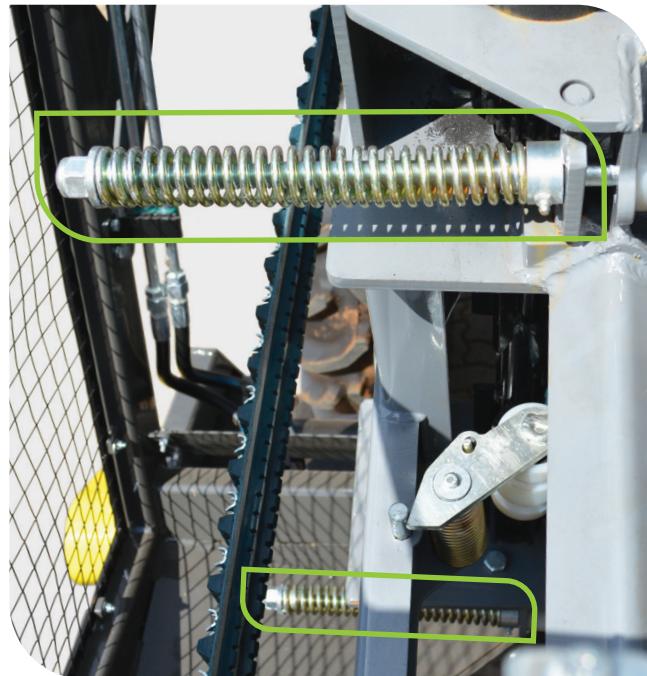

9.2 Line adjustment

- (1) Open the belt by adjusting the tensioner pressure depending on the average diameter of the rods.
- (2) Keep the conveyor belt tensioned.
- (3) Adjust the line height to approximately 50 mm from the ground, as recommended.

9.3 Separator adjustment

The separator opening is adjusted depending on the average root diameter and is done by increasing or decreasing the pressure on the tensioner.

9.4 Lower conveyor

Always keep the belt tensioned and do it evenly, respecting the measurements on both sides.

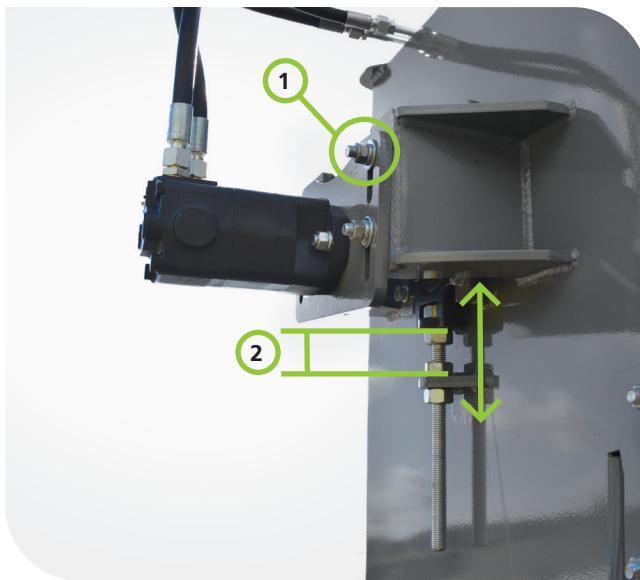

IMPORTANT

Grease bearings and gears daily.

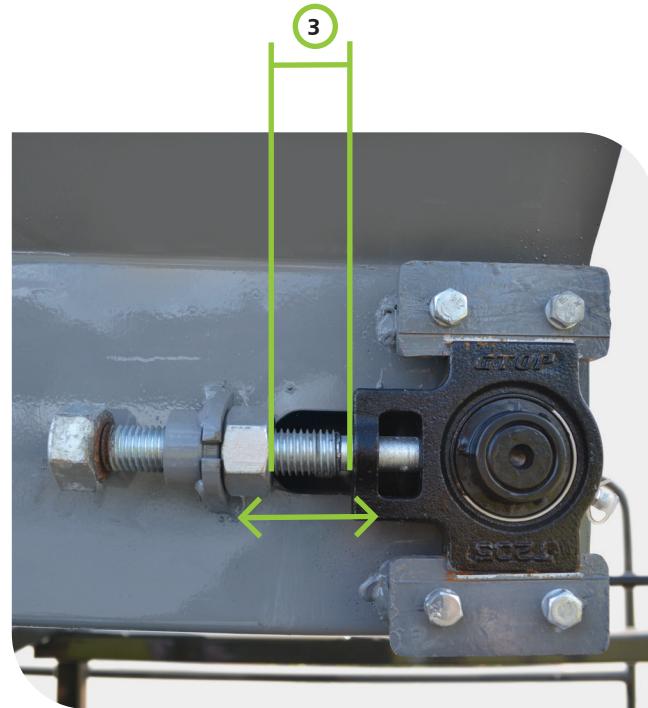

9.5 Adjusting the lifting conveyor

- (1) Loosen the 4 (four) engine mounting screws to stretch the conveyor belt. After this process, retighten them. On the implement side, which does not have an engine, this process is not necessary;
- (2) Maintain the same measurement standard on both sides of the implement.

9.6 Upper Conveyor

- (3) Maintain the same measurement standard on both sides of the implement.

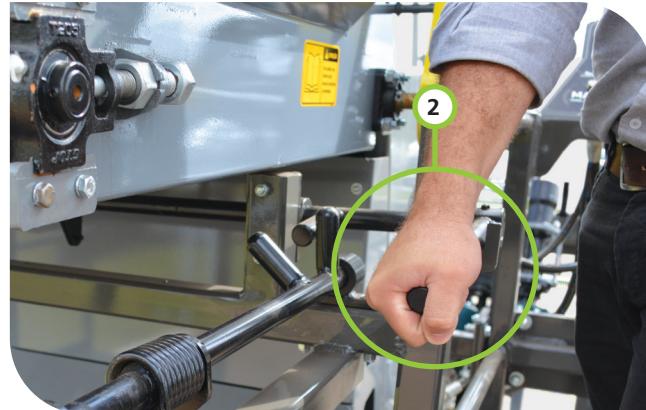

9.7 Control Panel

- (1) Conveyor speed adjustment;
- (2) Elevator speed adjustment;
- (3) Speed adjustment of start-up lines;
- (4) Separator speed adjustment;
- (5) Elevator key;
- (6) Radiator key;
- (7) Horn;
- (8) - Starter lines reverser.
- (9) - Elevator reverser.

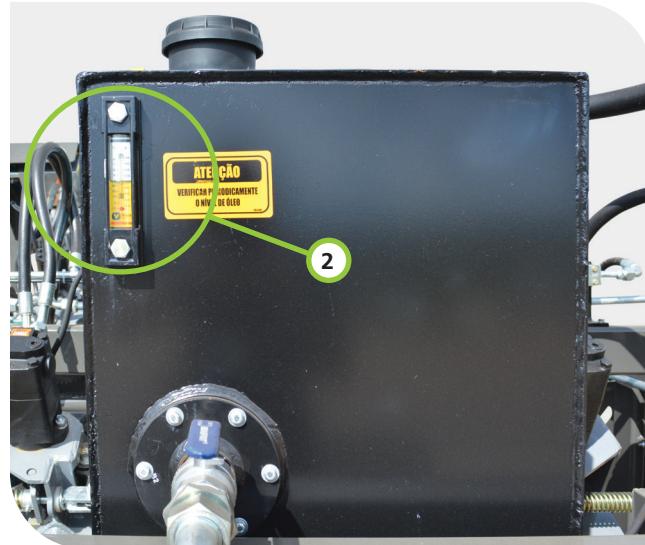

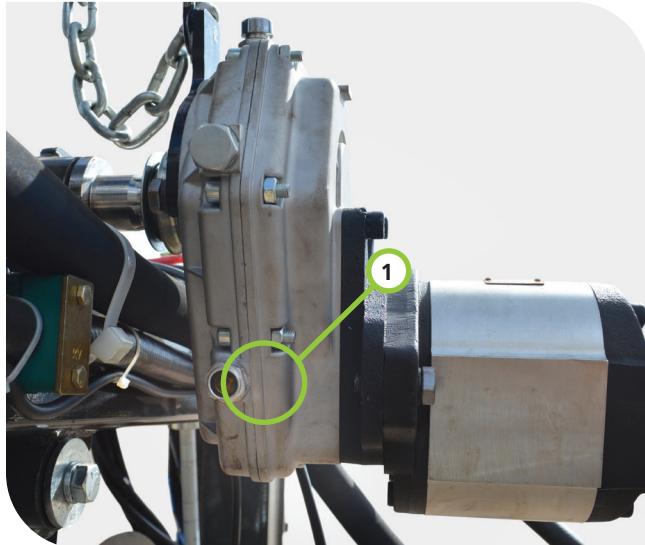

9.8 Bag changing

(1) To change bags, start by turning off the elevator; (2) after this process, manually unlock the lever;

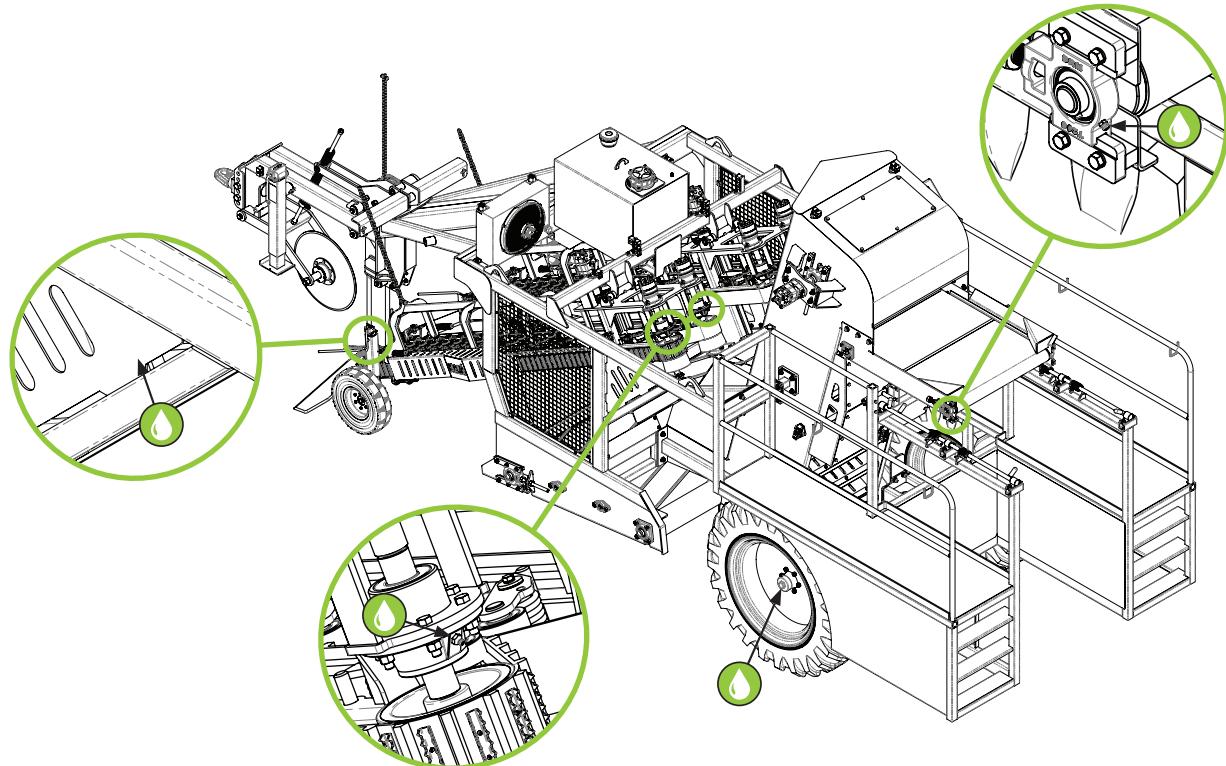

IMPORTANT

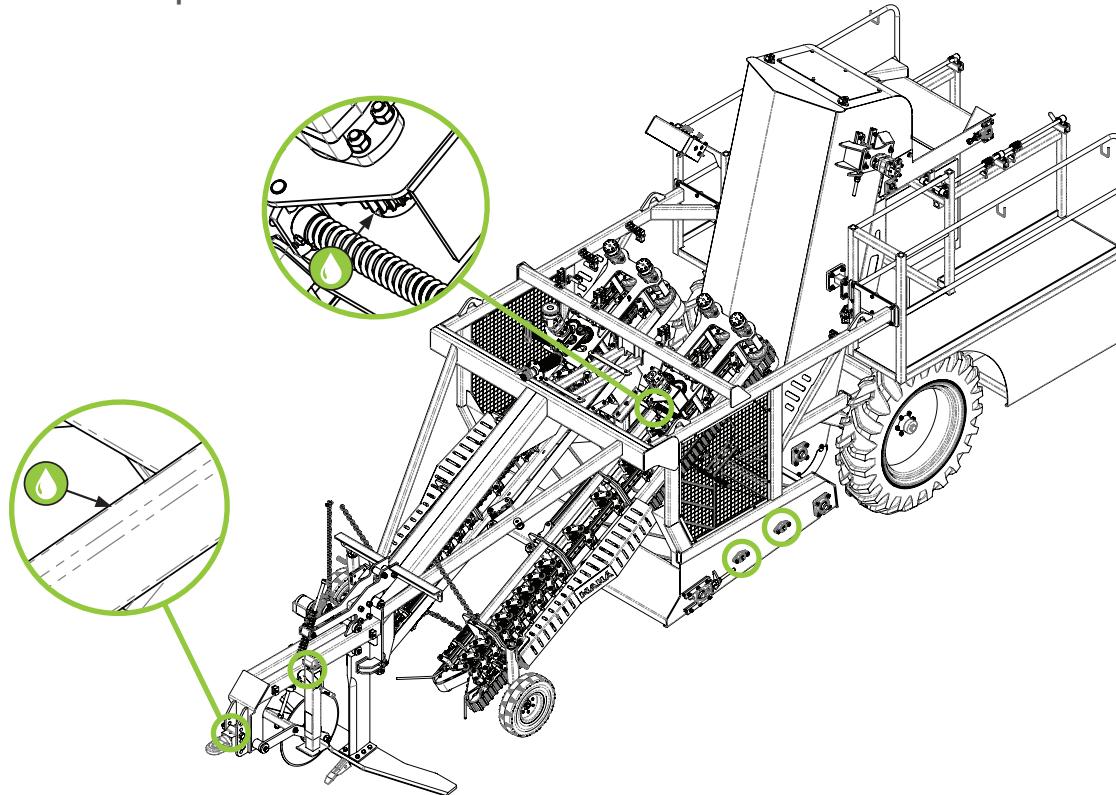

check the oil level of (1) gearbox and (2) oil reservoir daily
